

# Bendable Lance

## Accessory for OTS200

The bendable lance is an important addition to the OTS200 portable brazing kit. The lance tube is made from a special type of annealed copper that allows it to be easily and repeatedly bent into any position. This allows the operator to get the flame into areas which are difficult to reach with a normal rigid lance. This ability makes it particularly suited to plumbers and anyone doing repair work on air conditioning or refrigeration equipment.

### FEATURES

- Fits all existing OTS200 brazing tips
- 235 mm Total length
- Fits directly onto the OTS200 blowpipe
- Can be repeatedly bent into any position
- 190 mm of annealed bendable copper
- Totally flexible
